EDUCATION

Georgia State University

Atlanta, GA

B.S. Computer Science, Certification in Data Science — GPA 3.9

May 2026

Relevant Coursework: Artificial Intelligence, Machine Learning, Fundamentals of Data Science, Big Data Programming, Data Structures, Software Engineering, Operating Systems, Database Systems, Linear Algebra

CodePath Emerging Engineer Empowerment Scholar

Aug 2024 - Present

- Engineered full-stack web applications with **React** (Hooks, Router) and **REST APIs**, enabling multi-page navigation and real-time CRUD functionality.
- Enhanced technical interviewing proficiency by implementing advanced data structures and algorithms, improving problem-solving efficiency in mock interview settings.
- Applied cybersecurity practices in incident response, host intrusion prevention, and DoS mitigation using tools such as **Splunk**, **Wireshark**, and **Nmap**.
- Showcased industry-level capstone projects at Demo Day, demonstrating collaborative development and secure system design.

TECHNICAL SKILLS

Languages: Python, Java, SQL (MySQL), x86, R, HTML5, CSS3, JavaScript (ES6+), C/C++, Bash

Frameworks: React, Node.js, Flask, Django, Vite.js, TensorFlow, Spring Boot, Next.js, Streamlit

Developer Tools: Git, AWS (EC2, S3), Azure, GCP, Firebase, MongoDB, Hadoop, Spark, Tableau, Splunk, Kali Linux, Ubuntu, Catalyst, OWASP ZAP, Metasploit, Wireshark, Nmap, MISP, Visual Studio, PowerShell

Libraries: LangChain, LangGraph, FAISS, Transformers, Scikit-learn, OpenCV, Keras, Pandas, NumPy, Seaborn

Certifications: AWS Certified Cloud Practitioner, IBM Cybersecurity Analyst

PROJECTS

Research Assistant Extension | [GitHub Repository](#)

- Engineered a dual-module system: **Spring Boot** backend (Java) exposing Gemini-powered summarization endpoints and a **Chrome Extension** frontend for in-page highlighting, summarize actions, and note capture.
- Integrated Gemini using Spring **WebClient** (non-blocking), with Jackson/Lombok for typed JSON handling and clean DTOs; packaged the extension for local developer mode and seamless testing.

RAG-LLM Applications | [GitHub Repository](#)

- Built a suite of RAG apps (Website Knowledge Assistant, PDF Q&A, multi-PDF chat, LangGraph agent) using **LangChain**, **FAISS/Chroma**, **Streamlit**, **PyPDF2**, and web loaders for grounded QA.
- Designed modular pipelines (chunking, embeddings, hybrid retrieval) with prompt/chain configs for rapid iteration; optimized retrieval to reduce **latency by 25%**

Trace.ai | [HackGT 11 Project Devpost Link](#)

- Prototyped a pose-based recognition solution with 85%+ accuracy in identifying similar choreography to ensure dance authorship on social media.
- Utilized TensorFlow for pose estimation and **Dynamic Time Warping** (DTW) for sequence alignment, scoring similarity across a dataset of 20+ dance videos.

ACCOMPLISHMENTS

SCUDEM Outstanding Award |

- Under the guidance of Professor Grinshpon, formed one of GSU's first teams to participate in the Fall 2023 SCUDEM-SIMIODE Differential Equations Modeling Competition; our team received the Outstanding Award, the competition's highest international distinction.

Grand Integrator |

- Winning the 8th Annual Integral Bee and securing the title of Grand Integrator of 2023.

17th Annual Undergraduate Mathematics Competition |

- Led team through rigorous rounds of competition to achieve 3rd place in the 17th Annual Undergraduate Mathematics Competition.
